

BioGen™ DVHP™ Decontamination For Vapour Phase Decontamination Systems

BioGen Decontamination Services

Fully Validated Decontamination

Decontamination

BioGen DVHP decontamination is an effective bactericide, fungicide, virucide and sporicide, providing up to and including a 6 log kill against pathogens such as MRSA and c-difficile .

Howorth's Bio Technology Service Division provides decontamination of equipment and facilities. Using the BioGen DVHP generator, our highly trained engineers follow strict procedures to ensure complete, fully validated decontamination.

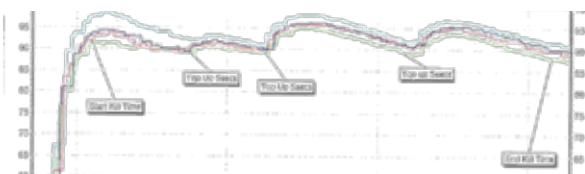

Flexible System

Every customer and facility has different requirements. With this in mind, the ultrasonic BioGen system is flexible enough to work in all areas, from cabinets and small enclosures up to large process and manufacturing facilities.

Howorth works closely with its customers to understand their unique requirements and to project manage the service accordingly.

Real-Time Monitoring

A unique function of the BioGen system is its real time cycle monitoring, which can be displayed or downloaded instantly to PC to give immediate customer confidence that the decontamination cycle has been effective.

Validation

All validated results, confirmed via BIs (Biological Indicators), prove that Howorth's BioGen DVHP vapour phase decontamination system is an effective bactericide, virucide and sporicide AND is biodegradable, leaving no residue.

Service Contracts

Howorth can carry out individual fumigation contracts or set-up servicing agreements for routine maintenance.

Our Markets

The BioGen system provides highly effective, safe, state-of-the-art dry vapour phase decontamination, for the control of healthcare-associated infections or the eradication of micro-organisms such as bacteria, fungi or yeasts across all industries.

Industries Served

- Hospitals
- Primary Healthcare Facilities
- Dentists
- Veterinary Surgeries
- Food, Beverage & Confectionary Industries
- Pharmaceutical Industry
- Cosmetic Industry
- Laboratories
- Education Facilities
- Airports
- Manufacturing Facilities

“Howorth carried out its work with minimal disruption to our activities. The fact we didn’t even have to remove equipment from the decontamination zone prior to the process, made a real difference.”

Why Use Howorth BioGen?

The Only DVHP Decontamination Service Provider

Fast and Effective

BioGen DVHP guarantees up to 6 log sporicidal killing, with real time monitoring to verify that the decontamination process has been successful.

No Residue

As this technology uses dry vapour hydrogen peroxide, there is no need to remove equipment from the affected area prior to the decontamination.

Validation

Full validation is achieved by using 6 log spore biologic indicators.

Reporting

The decontamination is fully documented in an individual decontamination record.

Our Engineers

Our engineers are highly skilled and experienced, and used to working across a number of specialist industries.
